The **PREMORMA 100** is a fully automatic device for preparing and dispensing formalin in the laboratory.

**Advantages PREMORMA 100**

» Fully automated preparation process

» Precise dosing

» Odorless

» Real time control of the pH value

» Cost savings with recycling instead of purchasing anew

The **PREMORMA 100** is filled with concentrated formaldehyde and buffered solution. Both components are mixed in the device automatically. The automation of the process ensures that no sediments of formalin residues occur. The finished product can be directly used.

The **PREMORMA 100** features a screen on the front. There, the level of formalin as well as the date and time are displayed. When the formalin level is low, the **PREMORMA 100** gives an audible and visible alarm.

Human error is prevented by using the **PREMORMA 100** for recycling. A constant quality of formalin is ensured.

Working with the **PREMORMA 100** stands for utmost user safety. A silicon stopper prevents any odors from contaminating the laboratory atmosphere. Because the process is automated within the device, the user has as little contact with formaldehyde as possible.
